

Adding Content to the Training Library

A quick guide for coaches & staff — how to get videos, drills, and guides into the dashboard.

First, the key idea: the Training Library is **link-based, not a file uploader**. You host the content somewhere (YouTube, Vimeo, Google Drive, Google Docs) and paste the **link**. The dashboard then plays it inline or opens it in a new tab. There is no "upload a file" button — and that's on purpose: it keeps the library fast and nothing gets lost.

1. Add a resource — step by step

1

Open the dashboard & sign in.

Go to lbsocceracademy.org/dashboard/ and sign in with an approved Google account.

2

Click "Training" in the left sidebar.

This opens the Training Library view with all current videos, guides, and session plans.

3

Click "Add resource" (top-right).

A form slides in from the side.

4

Fill in the form.

Title and **Link** are required. **Type** = Video, Guide, Session plan, or Link. Then optionally add **Length** ("6 min · 1 page"), tick the **Age groups** (K–2 · U6–U8, 3–5 · U9–U11, 6–8 · U12–U15, or All ages), tick **Topics**, and write a short **Description**.

5

Click "Add resource."

The card appears in the library right away. To change it later, click the card and choose Edit or Delete.

2. Where to put the actual file

The **Link** field needs a URL. Host the file first, then paste its share link:

YOUR CONTENT

BEST HOME

WHAT COACHES SEE

A video

YouTube or Vimeo

Plays inside the dashboard in a pop-up player

"Unlisted" is fine — no need to make it public

YOUR CONTENT	BEST HOME	WHAT COACHES SEE
A PDF / drill sheet	Google Drive set sharing to "Anyone with the link"	Opens in new tab when clicked
A session plan	Google Docs share link	Opens in new tab
Any web page	the page's URL	Opens in new tab

Only **YouTube** and **Vimeo** links embed and play in-dashboard. Everything else opens externally — which is perfectly fine for PDFs and docs.

3. Good to know

Start from the examples

The library ships with 8 starter entries (the Eagles Way guides + sample sessions). If it's empty, click "**Load starter resources**" to drop them in — then copy their format for your own.

Sharing across all coaches (the sync)

Resources save to your browser instantly and are built to sync to a **Resources** tab in the program's Google Sheet, so every signed-in coach sees the same library. That sync only works once the Apps Script backend has been re-deployed and its **setup()** run. Until then, entries live only on the device that added them.
